Exercice 1

Laravel

Travail présenté à
M. Marcos Sanches

Département de la formation continue
Collège Maisonneuve
Le 27 novembre 2023

1. Créer un projet Laravel en ligne de commande :

> composer create-project --prefer-dist laravel/laravel exercice1

2. Intégrer le CSS au projet :

J'utilise un thème Bootstrap <https://startbootstrap.com/theme/personal>

3. Créer un contrôleur en ligne de commande

\$ php artisan make:controller PersonalController

4. Quatre routes au minimum pointent vers le contrôleur :

```
1  <?php
2
3  namespace App\Http\Controllers;
4
5  use Illuminate\Http\Request;
6
7  class PersonalController extends Controller
8  {
9      public function index()
10     {
11         return view('home');
12     }
13
14     public function resume()
15     {
16         return view('resume');
17     }
18
19     public function projects()
20     {
21         return view('projects');
22     }
23
24     public function contact()
25     {
26         return view('contact');
27     }
28
29     public function message(Request $request)
30     {
31         return view('contact', ['data' => $request]);
32     }
33
34 }
```

5. Travailler avec un formulaire et la méthode post

```
<form method="post">
@csrf
  <!-- Name input-->
  <div class="form-floating mb-3">
    <input name="name" class="form-control" id="name" type="text" placeholder="Enter your name">
    <label for="name">Full name</label>
    <div class="invalid-feedback" data-sb-feedback="name:required">A name is required</div>
  </div>
  <!-- Email address input-->
  <div class="form-floating mb-3">
    <input name="email" class="form-control" id="email" type="email" placeholder="Enter your email">
    <label for="email">Email address</label>
    <div class="invalid-feedback" data-sb-feedback="email:required">An email is required</div>
    <div class="invalid-feedback" data-sb-feedback="email:email">Email is not valid</div>
  </div>
  <!-- Phone number input-->
  <div class="form-floating mb-3">
    <input name="phone" class="form-control" id="phone" type="tel" placeholder="(123) 123-1234">
    <label for="phone">Phone number</label>
    <div class="invalid-feedback" data-sb-feedback="phone:required">A phone number is required</div>
  </div>
  <!-- Message input-->
  <div class="form-floating mb-3">
    <textarea name="message" class="form-control" id="message" type="text" placeholder="Type your message here">
    <label for="message">Message</label>
    <div class="invalid-feedback" data-sb-feedback="message:required">A message is required</div>
  </div>
  <!-- Submit success message-->
  <!------>
  <!-- This is what your users will see when the form-->
  <!-- has successfully submitted-->
  <div class="d-none" id="submitSuccessMessage">
    <div class="text-center mb-3">
      <div class="fw-bolder">Form submission successful!</div>
      To activate this form, sign up at
      <br />
      <a href="https://startbootstrap.com/solution/contact-forms">https://startbootstrap.com/solution/contact-forms</a>
    </div>
  </div>
  <!-- Submit error message-->
  <!------>
  <!-- This is what your users will see when there is-->
  <!-- an error submitting the form-->
  <div class="d-none" id="submitErrorMessage">
    <div class="text-center text-danger mb-3">Error sending message!</div>
  </div>
```

6. Traiter les données reçues et afficher avec la méthode post dans le controlleur et les afficher dans une page.

```
9 public function message(Request $request)
10 {
11     return view('contact', ['data' => $request]);
12 }
13
```

7. Travailler avec un fichier Master

```
1 @extends('master')
2 @section('title', 'Projects')
3 @section('content')
4
5 <!-- Projects Section -->
6 <section class="py-5">
7   <div class="container px-5 mb-5">
```
